-12- Description of Change

Section G.1, The following analytical method changes were made:

EPA Method 6010 was added for the analysis of tin and lead.

EPA Method 365.4 was added for the analysis of phosphorus.

EPA Method 335.2 was added for the analysis of total cyanide.

EPA Method 350.3 was added for the analysis of ammonia.

The analytical methods for bromide, chloride, and fluoride were changed to EPA Method 300.0

Analysis for Tin (Sn113) was added to the list of required analyses.

	~ []	Environmental	LJ	Design Improvement	[V]	Criteria Change	13a. Justification . (mark one)
As-Found [] Facilitate Const. [] Const. Error/Omission [] Design Error/	r/Omission []	Design Error/Omiss	[]	Const. Error/Omission	[]		

The addition of analytical methods were made in order to allow more flexability in chosing laboratories to perform the analyses.

The change from previously specified methods to method 300.0 for chloride, bromide, and fluoride was made because the original method which were called out were not available on contract.

. BN 8/30/93.

Sn-113 was added because it was supposed to be run in order to check routine sampling on the 241-A Tank Farm cooling water stream.

14. Distribution (include name, MSIN, and no. of copies) See Attached Distribution

Method of Analysis

G. SAMPLE HANDLING AND ANALYSIS

Analyte List

G.1 Liquid Effluent Characterization Samples

Liquid effluent characterization samples will be analyzed for the following:

Semi-volatile organics (semi-VOA) Volatile organics (VOA) Total organic halides (TOX)	EPA method 8150 EPA method 8140 EPA method 8080
Graphite furnace atomic absorption	(AA) metals
Arsenic Lead Mercury Selenium Tin	EPA method 7060 EPA method 7421/6010 EPA method 7470 (cold vapor) EPA method 7740 EPA method 7870/6010
Hexavalent Chromium Bromide Chloride Fluoride Total oil and grease Total phenols Biological oxygen_demand_(BOD) Chemical oxygen demand (COD) Total organic carbon (TOC) Phosphorus Nitrogen, nitrate, nitrite Ammonia Total dissolved solids (TDS) Total suspended solids (TSS) Alkalinity pH	EPA method 300.0 EPA method 300.0 EPA method 300.0 EPA method 9070 EPA method 9065/9066/9067 EPA method 405.1 EPA method 410.1, .2, .3, .4 EPA method 9060 EPA method 365.2, .3, .4 EPA method 353.1, .2, .3 EPA method 350.1, .2, .3 EPA method 160.1 EPA method 160.2 EPA method 9040 EPA method 9050

------ Analyte List

Method of Analysis

<u>Radionuclides</u>

WHC approved laboratory method

Strontium-89, 90 Cesium-137 Ruthenium-103 Ruthenium-Rhodium-106 Tin-113

The handling and preparations and Site Undigetor.

7-7. When an analysis requires that a preservative be added to the sample bottle, the preservative is added in a clean laboratory environment prior to traveling to the sampling site. At the time of sample bottle preparation a chain of custody (COC) form will be initiated and will accompany the sample bottle into the field. A COC form will accompany each liquid effluent characterization sample, which may consist of several containers. The COC will account for each container. The sample bottles—are stored in a cooler sealed with tamper evident tape and all custody transfers are noted on the The handling and preparation of samples will comply with the procedures found in the, Environmental Investigations and Site Characterization Manual, WHC-CM-

Once a liquid effluent characterization sample has been drawn it must be in the physical control or view of the custodian, locked in an area where it can not be tampered with, or prepared for shipping with tamper-proof tape applied.

Physical control includes being in the sight of the custodian, being in a room which will signal an alarm when entered, or locked in a cabinet. When more than one person is involved in sampling, one person shall be designated and only that person signs as sampler. This person is the custodian until the samples are transferred to another location or group and shall sign when releasing the samples to the designated receiver.

The preparation of either a single or a group of samples for shipment to a laboratory shall comply with the procedure EII 5.11 "Sample Packaging and Shipping. Samples going off-site for analysis will conform to all federal regulations governing shipment.

The approved laboratory shall designate a sample custodian and a designated alternate responsible for receiving all samples. The sample custodian or his alternate shall sign and date all appropriate receiving documents at the time of receipt and at the same time initiate an internal Chain of Custody form using documented procedures. A continuous chain of custody will be maintained from the time of sampling until final disposition of all samples.

------ Liquid effluent characterization samples will be collected in commercially available, individually certified, precleaned containers. The certification The necessary containers, sample volumes, and preservatives for the analyses are identified per the QAPP (WHC, 1992).
